Observations by the naked eye

9. Find the object corresponding to the following criteria:
- The object is the second brightest star in its constellation.
 - The object is visible approximately 28 degrees from α UMi.
 - The equatorial coordinates of the object are: RA **11^h**, dec **+62°**.

Answer the questions:

Answers:

- What is the Bayer designation (e.g. β Ori) of the identified object?
- Write the name of the constellation in Latin, which the object is visible in.

Answer:

10. What is the angular distance between Vega (α Lyr) and Albireo (β Cyg)?

Answers:

11. a) Find the horizontal coordinates of Thuban (α Dra).
b) Find the zenith distance of Alcor (near ζ Ursae Majoris).

Observations with telescope

12. There are 3 binary stars on the given sky chart: β Cyg, δ Lyr, and ε Lyr.

For each of the binaries do the following:

Point the telescope to the binary. Compare the star field seen in telescope's field of view with three star charts given on a separate sheet. Write down the designations of the binary stars in each blank box under appropriate star chart. Mark North direction on every star chart.

*The maximum total time for all tasks is **20 minutes**.*
